

T-Jet 2 Important Maintenance Update

In order to keep your *T-Jet 2* running properly you must complete the scheduled weekly and daily maintenance as required. This also includes making sure that the print rail as shown below is oiled. Use a sewing machine or 3 in 1 oil for this rail and be careful as not to over saturate. Simply apply the oil with a clean cloth or cleaning swab.

DO NOT use WD-40 or a silicone spray lubricant of any type on the rail
